# **BISE**

700.635

# **Description**

Two-component textured polyurethane satin finish topcoat with high abrasion and weather resistance. The product has an easy roll application, providing a roller applied, uniform textured appearance.

### Use

Anti-skid textured topcoat for decks.

# **Informations**

| Finish           | Satin                         |            |
|------------------|-------------------------------|------------|
| Colours          | .001 White                    |            |
| Pack             | 0,75 – 2,5 l                  |            |
| Solids by Volume | 46 ± 2%                       | ISO 3233-2 |
| Specific Gravity | 1,34 - 1,38 g/cm <sup>3</sup> | ISO 2811-1 |
| Flash Point      | 39 °C                         | ISO 3679   |
| VOC              | 473 g/l                       | Calculated |
| Shelf Life       | Comp. A 36 months             | ·          |
|                  | Comp. B 24 months             |            |

# **Application**

# **SURFACE PREPARATION**

All surfaces must be clean, dry and free of contaminants before application of recommended products. Existing paint/materials must be dry, undamaged and compatible. Supplied air for surface preparation and cleaning must be dry and clean.

### **NEW BUILD**

**Composites**: composites must be fully cured before starting surface preparation. Provide superficial rugosity by mechanically sanding with sandpaper grade P100 - P180. Apply the first coat over the treated surface within 48 hours maximum.

### **COATED SURFACES**

**Primers and Undercoats:** clean, dry and undamaged compatible primers or undercoats. If overcoating times are exceeded, provide superficial rugosity to ensure proper adhesion.

### How to Apply

| Standard | Brush and roller |
|----------|------------------|

### Film Thickness per Coat

| DFT | Recommended: 100 µm<br>Standard application range: 90 - 110 µm  |
|-----|---|
| WFT | Recommended: 220 µm<br>Standard application range: 200 - 250 µm |

### Additional Application Information

| Theoretical spreading rate | Application range at the recommended thickness:  100 µm – 4,6 m2/l |  |  |
|----------------------------|--|--|--|
| Practical spreading rate   | Application range at the recommended thickness: 100 µm – 3,2 m2/l  |  |  |
| Thinner                    | Thinner P697 (5% max)  |  |  |
| Hardener                   | 635.000C BISE COMP. B  |  |  |
| Mixing ratio by volume     | 4:1  |  |  |
| Mixing ratio by weight     | 85:15  |  |  |
| Pot-life at 20 °C          | 5 h  |  |  |

### **Application notes**

Prepare the painting by mixing the components in the correct proportions. It is recommended to mix complete kits to avoid a wrong mixing ratio that may reduce the paint designed protection. If less paint is needed, smaller amount may be prepared in a mixing ratio cup.

Dilute the mixed product, not the components separately. Extra thinning will result in lower film build and slower drying.

Total thickness per coat to be achieved in 2/3 wet on wet coats.

The curing agent is sensitive to moisture, keep the can tightly closed.

The physical data of two-component products refer to components that have been already mixed.

# Compatibility

**Previous Coat** 

Delta UC HB, Epoply, Undercoat Pro

Subsequent Coat

# **Drvina Time**

|                      | 10 °C |      | 15 °C  |        | 20 °C  |        | 30 °C  |        |
|----------------------|-------|------|--------|--------|--------|--------|--------|--------|
|                      | Min   | Max  | Min    | Max    | Min    | Max    | Min    | Max    |
| Overcoating interval | N.A.  | N.A. | 8 h    | 48 h   | 6 h    | 24 h   | 4 h    | 24 h   |
| Complete curing      | N.A.  | N.A. | 7 days | 7 days | 7 days | 7 days | 5 days | 5 days |

N.B. The drying times and the overcoating intervals increase with higher thickness of the applied film. Always check that the existing painting film is perfectly dry before applying a further product coat. The surface must be superficially sanded if the overcoating interval is exceeded.

# **Conditions during application**

During application and curing:

Ambient temperature: minimum 15°C, maximum 35°C.

Minimum substrate temperature 10 °C (if during the curing the temperature drops below 10 °C, overcoating will take additional time).

Avoid the formation of condensation, the surface temperature should be at least 3 °C above dew point. Maximum relative humidity 85%.

Painting area should be well ventilated, during application and drying/curing.

BISE 700.635

# **Storage**

It is recommended to avoid exposure to air and extreme temperatures. To maximize the shelf life in the can, check that the container is closed during the storage and the temperature is between 5 °C and 35 °C. Avoid exposure to direct sunlight.

# **Safety Rules**

Comply with the provisions set by the local health and safety at work regulations. Avoid contact with the skin, operate in well-ventilated places and, if in closed areas, use vacuum cleaners, fans and air conveyors. During the application use appropriate PPE - Personal Protections Equipment (masks, gloves, glasses, etc.). Before using, read sections 7-8 of the SDS

INSTRUCTIONS FOR THE DISPOSAL OF THE BIOCIDAL PRODUCTS AND PACKAGING

Empty packaging containing biocidal products: disposal of empty packaging according to the requirements of the waste disposal law, for example by taking them to the recycling centre. Packages containing the unused biocidal product: Dispose of the product not used in accordance with the law of disposal of such waste, for example by taking it to a recycling centre, recycling of packaging is prohibited in this case. Do not empty into drains or watercourses.

INSTRUCTIONS FOR THE SAFETY SECURITY OF THE BIOCIDAL PRODUCTS AND PACKAGING Empty containers and containers still containing the biocidal product: Packaging must be disposed of as hazardous waste under the full responsibility of the holder of such waste. Do not empty into drains or watercourses.

### Disclaimer

The values indicated in the present technical sheet can have slight variations from one batch to another. The applied product must not come in contact with water, chemicals or subjected to mechanical stress before the curing is complete. The wet film thickness refers to the undiluted product. In case of dilution, this value increases. The above information is the result of accurate laboratory tests and practical experience, however, since the product is predominantly used outside the manufacturer's control, Boero Bartolomeo S.p.A. can only guarantee their quality. The information contained in this sheet may be subject to revision by the Company. For clarification, updates or further information, it is recommended to contact Boero Bartolomeo S.p.A. directly. The present datasheet annuls and replaces every other precedent to this one.
